Plant Botanical Name:

Helleborus x hybridus

USBG Plant Location:

National Garden

Sunlight:

Part to full shade

Plant Soil Type:

Well-drained, organically-rich garden soil

Plant Moisture Requirements:

Medium

Helleborus x hybridus are great plants for a shady spot in the garden. They have dark evergreen foliage and lovely flowers that show up in late winter throu range from yellow, pink and red to blackish-purple. Often sold by color versus a cultivar name, these plants tolerate summer heat and humidity, but should winds. Cut back flower stems after blooms fade to promote new foliage growth and cut back any scorched or damaged leaves in the spring. Once establis have few insect or disease issues.
