

**Plant Botanical Name:**

*Pogonia ophioglossoides*

**Plant Threat Level:**

Threatened

Rose pogonias is native from Nova Scotia to Wisconsin and southeast through the Appalachians to the Gulf Coast plain and into Florida. They are found in marshy meadows, or wet, grassy slopes. Although most often found growing in Sphagnum moss they also grow in sandy soil. In early summer, this small plant has one to three flowers that have a raspberry scent. Unfortunately, much of *Pogonia ophioglossoides*' habitat has been destroyed due to development construction and treatment of ditches and waterways. These habitats are especially sensitive and the plant is listed as Threatened or Endangered in most states of its native range.
