

Plant Botanical Name:

Osteomeles anthyllidifolia

Plant Threat Level:

Vulnerable

Known as the Hawaii Hawthorn or 'Ulei' in Hawaii, this evergreen member of the rose family is grown from sea level, where it is a low sprawling ground cover, to high altitudes, where it is more of a tree that reaches heights of 14 feet. It is found in the Cook Islands, Tonga and most of the Hawaiian islands. Hawaiians used the long, narrow leaves, the flowers and fruits in leis and the wood for fishing spears and musical instruments. Medicinally, the leaves and bark were pounded with salt and used as a poultice. It is thought to have been carried by birds, a close relative is found on coral rocks along the coast of Taiwan and Ryukyu Islands of Japan.
