

**Plant Botanical Name:**

*Echinacea tenesseeensis*

**Plant Sub Species or Variety:**

'Rocky top'

**USBG Plant Location:**

National Garden  
Not in Bloom

**Sunlight:**

Full Sun to part shade

**Plant Soil Type:**

Tolerates clay and shallow rocky soils. Does not benefit from added fertility.

**Plant Moisture Requirements:**

Low to moderate

This cultivar of the rare Tennessee coneflower is a tolerant of drought, heat, humidity and poor soil. You can divide clumps every 4 years when become tight. It rebloom without deadheading and the seed heads are highly attractive to birds. Some feel that the removal of spent flowers improves appearance and becomes true from self-seeding in the garden.

**National Garden Room Location:**

Regional Garden
